

Abstract

An electronic device having a first surface positioned adjacent to an article worn  
by a person and a second surface substantially perpendicular to the first surface, the  
electronic device having a headphone connector interface for accepting a headphone  
connector, the electronic device comprising a clip coupled with the electronic device, the  
clip having a first segment positioned adjacent to the first surface and a second segment  
configured at a predetermined angle with respect to the first segment, wherein pressing  
the second segment toward the second surface rotates the first segment away from the  
first surface; the clip further comprising an adapter coupled with the first segment of the  
clip, the adapter positioned between the first segment of the clip and the first surface of  
the object and having an adapter length.
